K1200 Ignition Cable Installation Guide

These premium quality silicone jacket spark plug ignition cables are shorter in length than the original equipment BMW wires; this allows for improved, more direct cable routing. As a guide, the farther away from the coil, the longer the wire to the spark plug. Please refer to the length dimension table below as a guide for installation. Except for cylinder #1 (9.75 inches 25 cm) which needs to be routed the same as original routing.

		Cylinder			
		# 1	# 2	# 3	# 4
Cable Length (approximate)	inches	9.75	7.0	6.0	9.75
	cm	25	18	15	25

(as measured from between boot to boot – what is visible of the cable)

It is recommended that only one cable be removed and replaced at a time, to ensure correct cylinder to coil tower connection.
