BMW K Bike Water / Oil Pump Rebuild Instructions

First drive out the old water pump seal then the oil pump seal and clean out the bore for the seals.

Lubricate the lip of the new oil pump seal with and drive in with an appropriate socket

Install the oil water pump shaft. Place assembly in a press, use the specially designed press tool to push the seal into the housing **and** onto the shaft at the same time. Back the large gear in the press, Best to accommodate the shaft to pass through the bottom of the press.

Secure a 8mm Allen wrench in a vice.
Install spacer and rotor.
Torque to 21-27 ft lbs. Gear should be able
to turn by hand.

Special thank you to Charlie Johnson,
of CJ Motorrad LLC, Wayzata MN
